CREDIT CARD SYSTEM

How it works:

Using the "Silent 600" Wireless Credit Card Taximeter (with internal or external printer) and a wireless modem (Motient, Mobitex (Cingular), CDPD, etc.), the driver performs the following steps*:

- ☞ Swipes the credit card. Taximeter prints the credit card receipt.
- ☞ Receipt is passed to passenger, who fills in tip, signs and returns receipt to driver.
- ☞ Driver enters tip into meter, sends the transaction, and in approximately 5 seconds the meter prints the receipt with approval.

* Prior to trip a pre-approval may be performed to ensure valid credit.

A truly simple credit card transaction, easily understood by both the driver and passenger, and as common as the credit transactions at restaurants, gas stations, etc.

Show me the money:

The money from each credit card transaction is deposited directly into your bank account, and with the use of the Internet and the transaction software, you can view and track every transaction. In addition, for fleets, the software will assist you in cashiering drivers at the end of their shift.
